

Celayix Time and Attendance takes the headache out of the time capture process by consolidating attendance information from multiple sources into a central database. Employee time information can then be fed into Celayix's bill/pay engine, which automatically applies your business rules to calculate gross totals for fast payroll and financial processing.

For organizations large and small, Celayix automates the collection and management of employee time-related information. Celayix Time and Attendance solutions include:

Electronic Time Sheets. Celayix's web time sheets allow employees to enter time sheets from anywhere, anytime using just a PC and Internet access.

Telephone Check-In. Celayix's telephone check-in system allows employees to dial in using a telephone or cellular phone to check-in and check-out from shifts. Since attendance is recorded in real-time, you can be notified of any attendance irregularities via email or text messaging.

Biometric Hand Readers. Celayix integrates with HandPunch biometric hand readers to capture time. Biometric hand readers are perfect for high security environments or where time fraud ("buddy-punching") is a problem.

Time Clocks. Celayix integrates with badge reader time clocks. Time clocks are a simple and affordable way to capture time capture by simply having your employees "swipe-and-go".

BENEFITS:

- Increase payroll accuracy;
- Reduce manual re-keying;
- Shorten billing cycles;
- Track attendance in real-time; and
- Monitor employee performance.
