

Voice Xpress

A Phone-based Collaborative Scheduling and Time and Attendance Solution.

Overview

Celayix Solutions

Voice Xpress allows companies to use the telephone as a powerful attendance-tracking tool. If you still track employee attendance manually then you know how time consuming, costly and error prone it can be. Bills and paychecks are often delayed because of the significant lag between the completion of the shift and when time is actually recorded.

Benefits

- A. Increase payroll accuracy and timeliness with phone-based punch system which reduces error prone manual processes.
- B. Monitor individual attendance and overall coverage in real-time.
- C. Communicate and confirm schedules more efficiently.
- D. Convenient punch system for remote workers who have access to a cell phone.
- E. Less time spent answering employee questions.

Product Features

Schedule Publishing

Voice Xpress gives employees access to their schedules 24 hours a day, 7 days a week. Employees log in via the phone to hear a wide range of pertinent details on their shifts. If updates need to be made, they are reflected on these schedules in real-time.

Shift Confirmations

Employees can log into Voice Xpress to confirm or decline shifts that they have been scheduled for. This allows the scheduler to validate schedules and reassign any shifts that would have otherwise been missed.

Teleclock with Alerts

The Voice Xpress Time Clock is a phone-based system that allows employees to record their attendance and safety checks anywhere. Ensure field workers are punching in/out from the appropriate site by tracking phone numbers and setting up alerts to notify you when they are not.

Telephone Based Time and Attendance Solution
