

eTime Xpress

A Workforce Management Solution

An Advanced Scheduling and Time & Attendance Solution Configurable to Your Specific Needs.

Overview

Celayix Solutions

As your business grows from 50 to 500 to 5000 employees or more, specialized automation tools are needed to manage the complexities of scheduling. In a typical day, a busy scheduler may be trying to match employee qualifications, reduce overtime costs, level workloads, fill absentee positions or just track employees at customer sites. With so many things to juggle, a scheduler needs the latest scheduling tools to effectively manage his or her workforce.

Benefits

- A. Reduce scheduling errors by automatically incorporating complex calculations.
- B. Eliminate avoidable overtime with automated warnings and availability searches.
- C. Provide insight on the profitability of your workforce deployments.
- D. Integrate with any other relevant HR software application.

Product Features

eTime Xpress makes scheduling and time and attendance easy by making sure all of the tools a manager will ever need are always at their fingertips.

Advanced Rules-Based Scheduling

Instantaneously assign thousands of employees to assignments based on coverage rules such as lowest cost and seniority, employee preferences or other business rules.

Visual Scheduling

Easily create optimized schedules with our intuitive interfaces, flexible configuration, and powerful visual components.

Zero Conflict Scheduling

Message alerts identify conflicts such as overtime, double bookings, failed skill requirements, time off, exceeds maximum pay rate and more.

Time & Attendance

As attendance is recorded, pay and bill rates are applied and summarized automatically into easy-to-read reports that can be seamlessly exported to any financial, payroll or billing solution.

Profitability Reports and Centralized Information

Gain insight on how workforce deployments affect business profitability and understand where and how to optimize them with easy-to-read reports. Business intelligence is created by drawing information directly from a central database to which all components of the system are linked.

Integration and Data Exchange

Reduce time and headaches with respect to software integration. Celayix solutions can integrate with any relevant business software using industry standards like SOAP web services, sockets, API, ASCII file import/export and others.
