

Celayix Time Kiosk

Running a large event means getting hundreds of workers checked in quickly, accurately, and often without Wi-Fi or internet connection.

For large events, your check-in process can't fail.

**Check in Every Shift, Fast.
No Signal Required.**

Celayix Time Kiosk is a dedicated iOS and Android app that turns any device into a shared employee check-in station with no hardware, connections, or personal devices required.

Employee Time Clock Software App for Any Location

Works Without Internet

Cellular networks get overloaded when crowds arrive. Celayix Time Kiosk captures every clock-in, clock-out, and break locally, then syncs automatically when connectivity returns. No data loss. No manual reconciliation.

No Personal Devices Required

Employees check in on a shared device. No app downloads on personal phones, no reimbursement concerns, no device compatibility issues—just a fast, consistent process for every worker.

Fast to Deploy

Set up in minutes without expensive hardware, complicated configuration, or manual syncing. Install the app on a standard iPad or Android device and sync employee lists automatically with the Celayix platform.

No Inflated Shift Time

Geofenced mobile check-ins can add 15 minutes or more per employee. Celayix Time Kiosk records attendance when the employee physically checks in at the device, giving you cleaner records tied to actual arrival time.

Scale to Large Events with Less Supervision

Add as many kiosk stations as you need for simultaneous check-ins across multiple entrances or staff areas. Deploy on common, inexpensive devices and reduce the staffing burden of manual check-in. One supervisor can oversee multiple kiosks rather than paying multiple supervisors to manage lines.

Celayix — Every Shift Covered

Celayix Time Kiosk integrates with Celayix's shift scheduling and time-tracking platform for complex event and venue operations.

For more than 25 years, Celayix shift management has helped organizations improve coverage, control labor costs, and reduce operational chaos in high-stakes environments.
